Art Unit: 1614

Claims 1-7 and 24 are presented for examination.

Claims 1-7 and 24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claimed 1-7 are directed to the method of "preventing cataracts, retinopathy, lens cell damage and retinal cell damage caused by diabetes". The instant specification fails to describe how the "prevention" is done. The examples in the specification are directed to treating, however there are no support to demonstrate the prevention of the claimed disorders. Therefore, the fact pattern indicates that artisan was not in possession of the claimed method of use. Claim 24 is directed to a method of treating ocular complication selected from the group consisting of: "loss of PKC in eye lens cell, polyol accumulation in the eye, galactitol formation from galactose in the lens cell, vascular leakage in the eye and the expression of aldose reductase in the retina". Such method requires treatment of unspecified disease and no evidence indicates that the treatable disease was known to the applicant. Therefore, the fact pattern indicates that artisan was not in possession of the claimed method of use.
